Time dilation varies measured between events with masses now in the distance accelerating effects does past and future exist now? beyond our vision we must know how our perception of time defined by motion defined by lines fourth dimension design created moments within our minds a constant illusion maintaining different rates relative conclusion with redshift proven traits does past and future exist now? beyond our vision we must know how our perception of time defined by motion defined by lines fourth dimension design created moments within our minds relativity gravitational potential frame of reference different outputs different times what is the relevance of time? being an illusion in our minds center of gravity the cycle delays distance determines modified when away does past and future exist now? beyond our vision we must know how our perception of time defined by motion defined by lines fourth dimension design created moments within our minds what is the relevance of time? being an illusion in our minds
