

# Heroism

## Dan Le Sac vs Scroobius Pip

(Take a deep breath now, you might need to call upon it later)

I'm fit to fight  
My name is Pip  
If luck be a lady tonight  
Then baby I'm all about the dick  
No shit, nah  
Not a bit of billy bullshit  
If something ain't right  
Then you probably shouldn't force it  
Fire in your eye?  
Take it to the bridge and torch it

Forthwit  
This ain't a game changer  
Cause I ain't playing  
I'm too old to feign danger  
Shit, my hair is graying  
Fuck your plain mangers  
I was born in the rain  
While a hoard of shamed strangers  
Were calling my name  
I'm Nicholas Cage  
I could eat a beat for days  
Retreat to seek the pace  
Meet and greet the bass  
Dress it up with words  
Complete from feet to face  
Secrete technique with grace  
Defeating the need for haste

[Hook: x2]  
I dream of heroism [x2]  
I dream of hero-hero-heroism

It's my endeavor to weather like good leather  
You should never sever the pain, it's not clever  
Call me anything you want  
Use any fucking letter  
But please rest assured  
I've been called worse by better  
A fools worst endeavor  
When false words are tethered  
Is to run instead of just walk  
Towards adverse weather  
Measure the pleasure and pain till they're the same  
And if ain't level pour it out and start it again

Consider me a little ploy to destroy and annoy  
Your little ode to joy for the hoi polloi  
Oy, it gets more dark  
Than a rorschach blot mark  
Read by an oligarch  
On a fucking polygraph  
Ha Ha Ha Ha Ha  
They say you gotta laugh  
Cover up your mental scars

With a little jolly mask  
Put all your fears in a frown  
And swallow them down  
Like the tears of a clown  
When no one's around

How you living like a piggie  
In the middle of a ravine?  
Trying to make your way out but you get  
Stuck in the...  
Is it...  
Trying to make your way...  
When you get...  
Stuck in the...

It ain't about glass half full  
Or glass half empty  
Shut up and down what's left  
Or fill that shit back up again, see

[Hook x2]
